Figure 1: Relational Database Schema

1. How many tuples will be returned by the following relational algebra query?

$$\pi_{book\_title}(book)$$

Solution: 2

2. What question does the following expression answer?

$$|\pi_{author\_id}(author) - \pi_{editor}(book)|$$

Solution: How many authors are not book editors.

3. Write a relational algebra expression that returns the names of all authors who are book editors.

Solution: $\pi_{first\_name,last\_name}(author \bowtie_{author\_id=editor} book)$

4. Write a relational algebra expression that returns the names of all authors who are **not** book editors.

Solution: $\pi_{first\_name,last\_name}((\pi_{author\_id}(author) - \pi_{editor}(book)) * author)$

5. Write a relational algebra expression that returns the names of all authors who have at least one publication in the database.

Solution: $\pi_{first\_name,last\_name}(author * author\_pub)$

6. How many tuples are returned by the following relational algebra expression?

$$author \rtimes_{author\_id=editor} book$$

Solution: 11

7. What question does the following relational algebra expression answer?

$$author * (author\_pub * (\sigma_{month='July'}(book) * pub))$$

Solution: Which authors authored a pub that was published in July?
